

## Custom-configured for optimal mixing results

Our mixing machines are tailored for dosing and production processes involving precise, homogeneous blending of liquid raw materials or additives. Whether for small or large volumes – the systems are designed per project and support both batch and continuous operation.

- Filling into IBCs or mobile containers
- Batch or continuous inline operation
- Stand-alone or integrated into dosing stations

## Functionality

Liquids are transferred from feed tanks via dosing pumps. Homogenization is achieved with agitators specifically designed for the medium, viscosity, and density. Optional inline integration into a reaction system is possible for precise microdosing. For continuous processes, static mixers are used.

## Outstanding features

- Inline integration into reaction systems
- Water treatment system integration (e.g. for demineralized water)

## Technical Data

SPECIFICATIONS	
Tank volume	2 – 20 m <sup>3</sup>
Material	carbon steel or stainless steel
Heating	thermal oil or electric
Delivery	worldwide
ATEX	on request
WAG	on request
